COMPLETE CONCUSSION CARE

Smarter, Safer Concussion Management for Student and League Athletes

Panno Medical Inc. is now offering a new **Complete Concussion Care Program** for athletes who compete in contact, limited contact and non-contact sports at the high school and or league level. Concussion prevention, awareness and treatment is a big part of all sports programming today. It has been reported that ten percent of athletes who compete in contact sports will receive a concussion within a playing season. We expect this number to increase as more and more people become familiar with mechanisms of injury and the common signs and symptoms of concussions.

- **Preseason concussion education for players, coaches, parents and staff**
 - Basic information about concussions signs, symptoms and recovery
 - Risks of returning to play too early
- **Baseline testing with ImPACT**
 - Athletes take a pre-season computerized test to establish their baseline level of memory, reaction time and processing speed
 - ImPACT (Immediate Post-Concussion Assessment and Cognitive Testing)
- **Panno can provide your School or Team(s) with the ImPACT test at a location and time that is convenient for the Athletes, Coaches and Parents**
 - Panno will send one of our representatives to provide information to the Athletes, Coaches and Parents about concussions, and then administer the ImPACT test to the athletes
- **Return-To-Play Decision Support**
 - Panno has established a team of Sports Physicians, located throughout the GTA and surrounding area to decide when an athlete who has had a concussion and is ready to return to play
 - Panno can provide your School or Association with a program with clear guidelines that support timely and safe return to play so that school administrators, athletic departments and families can feel greater confidence in these decisions

*PANNO can implement this program with your team **NOW** or for your next season, call now and book us in!!*
